ONLINE BOOK STORE AND APPS

SELL EVERYWHERE

Get the flexibility of selling traditional books and eBooks on the eStore and from your app. So customers can surf availability, see details, add to cart and pay.

AD SERVING

Integrate with Google Ads or serve custom ads. You can upload ads from the control panel and define the duration for which the ad has been booked. Show customers ads that capture their interest and add to your pipeline.

ANNOTATE, HIGHLIGHT & BOOKMARK

Add notes or comments for later reference or highlight text that you want to mark out and re-visit later. Bookmark multiple pages so you can jump directly to them.

EBOOKS ON ALL DEVICES

Readers can access eBooks in PDF or EPUB format. Upload files at the backend, including the cover, summary, details and have them ready for selling. Uploaded files are automatically optimized and indexed along with size reduction to ensure quick display and rendering on all devices.

SEARCH, RATE AND REVIEW

The fully UNICODE solution allows searching for a range of books by category of best seller, authors, genres, titles, featured book, coming soon or content. Read the summary, add comments, rate and give reviews on each book giving readers the ability to recommend a book to others for purchase.

OFFLINE READING

A library gets created for offline reading of already purchased books. This allows readers to access these books without the need for being connected to the Internet.

USER ACCESS CONTROL

Users get individual access via username and password or social media. Give control rights or restrict access to other administrators, authors and readers.

INTEGRATION WITH GOOGLE ANALYTICS

Track performance with powerful tools for monitoring and analyzing reader traffic. You can see who is visiting, what they are looking for and where they are coming from.

NOTIFY AND GET FEEDBACK

Send messages or notifications to readers on new uploads or offers. Keep them engaged and get reader feedback for the publisher or author.

SECURE DRM

The encryption and Digital Rights Management (DRM) at the core of the system helps restrict unauthorized distribution of books. The DRM ensures that books can only be read using your app. You can even limit the number of times or devices a book can be accessed on once purchased.

AUTHOR ACCESS

Give a separate page with an intro of each author and their books. Authors get special access to see their book sales real time on a daily, weekly, monthly or custom range.

SOCIAL MEDIA INTEGRATION

Promote books by leveraging social media. Share previews on Facebook, Twitter, LinkedIn and other social networking sites that let you capture the attention of new readers.

eBOOK CONVERSION

MULTIPLE FILE FORMATS

Different file formats need to be handled differently. Starting from source software like Microsoft Word, Apple Pages, PageMaker, InDesign and QuarkXPress to output formats like PDF, EPUB, XML and HTML, we convert files to your preferred eBook format.

MANAGING COMPLEXITY

Our understanding of book complexity allows us to manage variable formatting styles such as foot notes, inset quotes, images, tables, font type and style variations.

AUTOMATION

While book complexity is directly proportionate to conversion effort. We leverage our knowledge of software and use home-grown custom Automation tools to help reduce errors, conversion time and effort. The time-cost benefit is passed on to you as a publisher.

CUSTOMER SPEAK

"eBooks are the future. We expect a sea change over the next few years in India. The youth today is reading online. An increasing number of smart phones and tablets in the local market shows a huge opportunity ahead. Thanks to TABiT, we are ready for the eReading market today."
